                                                                                                                                                                                                                                                                                                                                                                                          PERIOD. ENGL. 14:741-73 (1597).

TOROL. BIGL. EVOL. 14:741-73 (1597).

FUNCTION: ESSENTIAL FOR BIOLOGICAL CLOCK FUNCTIONS. DETERMINES THE PERIOD LENGTH OF CIRCADIAN AND ULTRADIAN RHYTHMS; AN INCREASE IN PER DOSAGE LEADS TO SHORTENED CIRCADIAN RHYTHMS AND A DECREASE LEADS TO LENGTHENED CIRCADIAN RHYTHMS AND A DECREASE LEADS TO LENGTHENED CIRCADIAN RHYTHMS AND A DECREASE RHYTHMIC COMPONENT OF THE MALE COURTSHIP SONG THAT ORIGINATES IN THE THORACIC NERVOUS SYSTEM. THE BIOLOGICAL CYCLE DEPENDS ON THE RHYTHMIC FORMATION AND NUCLEAR LOCALIZATION OF THE TIM-PER COMPONENT OF PER. NUCLEAR ACTIVITY OF THE HETERODIMER COMPLEX. LIGHT INDUCES THE DEGRADATION OF THE TRANSCHIPTION THROUGH A NEGATIVE FEEDBACK LOOP. BEHAVES AS A NEGATIVE ELEMENT IN CIRCADIAN TRANSCRIPTIONAL LOOP. DECS NOT APPEAR TO BIND DNA, SUGGESTING INDIRECT TRANSCRIPTIONAL HIBSTION (BY SHILARITY).

11- SUBUNIT: FORMS HETERODIMER WITH TIMELESS (TIM); THE COMPLEX THEN TRANSCLOCATES INTO THE NUCLEUS (BY SIMILARITY).

11- SUBCELLULAR LOCATION: NUCLEAR AT SPECIFIC PERIODS OF THE DAY. FIRST ACCUMULATES IN THE PERINUCLEAR REGION ABOUT ONE HOUR BEFORE FOR NUCLEAR LOCALIZATION (BY SIMILARITY).

11- PTM: PHOSPHORYLLATED WITH A CIRCADIAN RHYTHMICITY, PROBABLY BY THE DOUBLE-TIME PROTEIN (DBT). PHOSPHORYLLATED IN THE STABILITY OF PER MONOMER AND IN THE FORMATION OF HETERODIMER DEPARTMENT OF PER MONOMER AND IN THE FORMATION OF HETERODIMER DEPARTMENT OF PER MONOMER AND IN THE FORMATION OF HETERODIMER DEPARTMENT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     15-JUL-1999

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB
